How to Install SDL 2 on a Macintosh (thanks to Dr. Malloy):

1) You must have home-brew installed on your Mac. Your can use the command:
   /usr/bin/ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"

2) Assuming that installed without errors, then the following 3 commands install SDL 2
   brew install sdl2
   brew install sdl2_ttf
   brew install sdl2_image
