

# **RTT-Based Congestion Avoidance for High Speed TCP Internet Connections**

by

**James John Martin**

A dissertation submitted to the Graduate Faculty of North Carolina State University in  
partial fulfillment of the requirements for the Degree of Doctor of Philosophy

**ELECTRICAL ENGINEERING**

Raleigh

1999

**APPROVED BY:**

---

Chair of Advisory Committee: Arne Nilsson

---

Co-chair of Advisory Committee: Injong Rhee

---

Andy Rindos

---

George Rouskas

---

Mladen Vouk

**DEDICATION**

*To Jackie, Andy, JoJo and Chas --*

*For your patience, support and love*

*--all of my love*

## **BIOGRAPHY**

After receiving a Master's degree in Computer Science from Arizona State University, I took a job with IBM's Networking Software Division. I have worked on a variety of products involving SNA, TCP/IP and IP security. My research interests include IP protocols with a focus on congestion control. An earlier project involving an analysis of the congestion control algorithm employed by SNA's High Performance Routing protocol set the direction for this dissertation.

## TABLE OF CONTENTS

	Page
LIST OF TABLES .....	<i>vii</i>
LIST OF FIGURES.....	<i>ix</i>
1. Introduction .....	1
2. Background .....	8
2.1 Introduction .....	8
2.2 Gateway Congestion Control.....	10
2.3 TCP Congestion Control .....	12
2.4 End-to-end Congestion Avoidance Based on Implicit Feedback .....	13
2.4.1 Delay-based End-to-end Congestion Avoidance (DCA) .....	16
3. Related Work and Motivations .....	22
I MEASUREMENT ANALYSIS .....	27
4. Methodology .....	31
4.1 Data Collection Methodology .....	31
4.1.1 Validating the Minimum Link Capacity of the Path .....	32
4.1.2 Extracting the Packet Round trip Time Samples .....	34
4.2 Defining the Metrics .....	41
4.2.1 Correlation Indication Metric .....	41
4.2.2 Loss Conditioned Delay Correlation Metric (LCDC) .....	43
4.2.3 Loss Conditioned Delay CDF .....	44
4.2.4 Validating the Metrics .....	45
5. Measurement Data and Analysis .....	55
5.1 Introduction .....	56
5.2 Statistical Analysis .....	70
5.2.1 Correlation Indication Metric .....	70

5.2.2	Loss Conditioned Delay Correlation Metric (LCDC)	74
5.2.3	Loss Conditioned Delay CDF	80
5.3	Hypothetical Throughput Analysis of DCA	87
5.3.1	DCA Throughput Analysis: Overview and Assumptions	88
5.3.2	DCA Throughput Analysis Approach	91
5.3.3	Demonstrating the DCA Throughput Model Analysis	94
5.3.4	DCA Throughput Analysis Results	95
6.	Summary of Measurement Analysis	100
II SIMULATION ANALYSIS		102
7.	Validation of the Measurement Results over Simulated Internet Paths	105
7.1	Simulation Methodology	106
7.1.1	Location of Congestion	107
7.1.2	Developing the Models	110
7.2	Validation of the Models	112
7.2.1	Emory Path Model	112
7.2.2	ASU Path Model	117
7.3	Potential Difficulties for DCA	121
7.3.1	Problems over the Emory Path	121
7.3.2	Problems over the ASU Path	123
8.	Simulation Analysis of TCP/DCA	126
8.1	The TCP/DCA Protocol	127
8.2	Validation that DCA Reactions Have Minimal Impact on the Network	130
8.3	Confirming the General Result	140
9.	Validation of Results using TCP/Vegas and TCP/Dual	146
9.1	The Models	146
9.1.1	TCP/Dual Model	147
9.1.2	TCP/Vegas Model	147
9.2	Simulation Analysis	150

9.2.1	Analysis of TCP/Dual .....	152
9.2.2	Analysis of TCP/Vegas .....	155
10.	Summary of Simulation Analysis .....	158
11.	Conclusions .....	161
12.	Future Work .....	164
	REFERENCES .....	166
	APPENDICES .....	168
	Appendix A. Adapting a TCP Throughput Model for DCA .....	168
