Project 5: Final Project

Concept due: Saturday, 12/01/2012, 6pm

Draft due: Monday, 12/10/2012, 3pm

Final version due: Friday, 12/14/2012

</div>

Description

For this project, you must create a short animation, lasting 15-30 seconds. You need to choose a focus: character animation, facial animation, or dynamics. You can use any of our previous models, the ones on the class website, or create your own. You must light and render everything. Your final movie should be saved in standard format (e.g., .mov).

Examples:
Character animation: bring one of the available models to life in a short story.
Facial animation: use one of the available models, create several blend shapes, let the character speak a sentence.
Dynamics: create a story involving several dynamic effects.

You are free to be as creative as you like with the animation try to make the final product entertaining. As always, have fun with this project!

Submission Requirements

The following information should be on your webpage:

- the date, a title, and a brief description of this project

- a link to the Maya file (.mb) of your project

- a description of your idea and implementation

- a link to the final animation in standard format

We will view (and critique) some of your results in class.
